

Bentley Technology Precinct

To support a funding application to the State Government for redevelopment of the technology precinct in Bentley, the board of Bentley Technology Park engaged Pracsys to develop estimates of the economic impact of the precinct in an expanded form.

Pracsys conducted extensive consultations with technology precinct tenants and Curtin University in order to identify opportunities for improvement in the physical layout of the precinct that would enhance the organisations ability to cooperate. Pracsys also prepared estimates of direct and multiplied economic benefits to the West Australian economy from the operation of the expanded technology precinct now and in the future.

Outcome

The economic impact assessments supported the Board's funding application to the State Government, which successfully secured the requested funding increases.

Client: Department of Industry and Resources
